Graph: $A \rightarrow A$, $B \rightarrow B$, $A \rightarrow B$, $B \neg A$
Rules: $A' = A \mid \neg B$ $B' = B \ \& \ A$

Sync attractors: 10; 11 | type: Complex Composite
Async attractors: 10; 11 | type: Multi-attractor fixed-point

Async convention: the STG contains all possible one-node updates from the current state. Self-loops are retained only when no non-self outgoing transition exists from that state.

Signed graph
